NIGHT SHIFT · LONDON · OCTOBER 2026 · BUILT ON MUBIT

Brief Builder

Turn “can u do these?” into a booking.

A stylist’s DM inbox that drafts priced replies in her voice, and learns from every fix she makes. Fully right replies go from **30% to 85%** on DMs it never trained on.

brief-builder.buy-ea2.workers.dev

THE PROBLEM

Every booking starts with a DM that says almost nothing.

📷 can u do these? saturday

how much for knotless

sat??

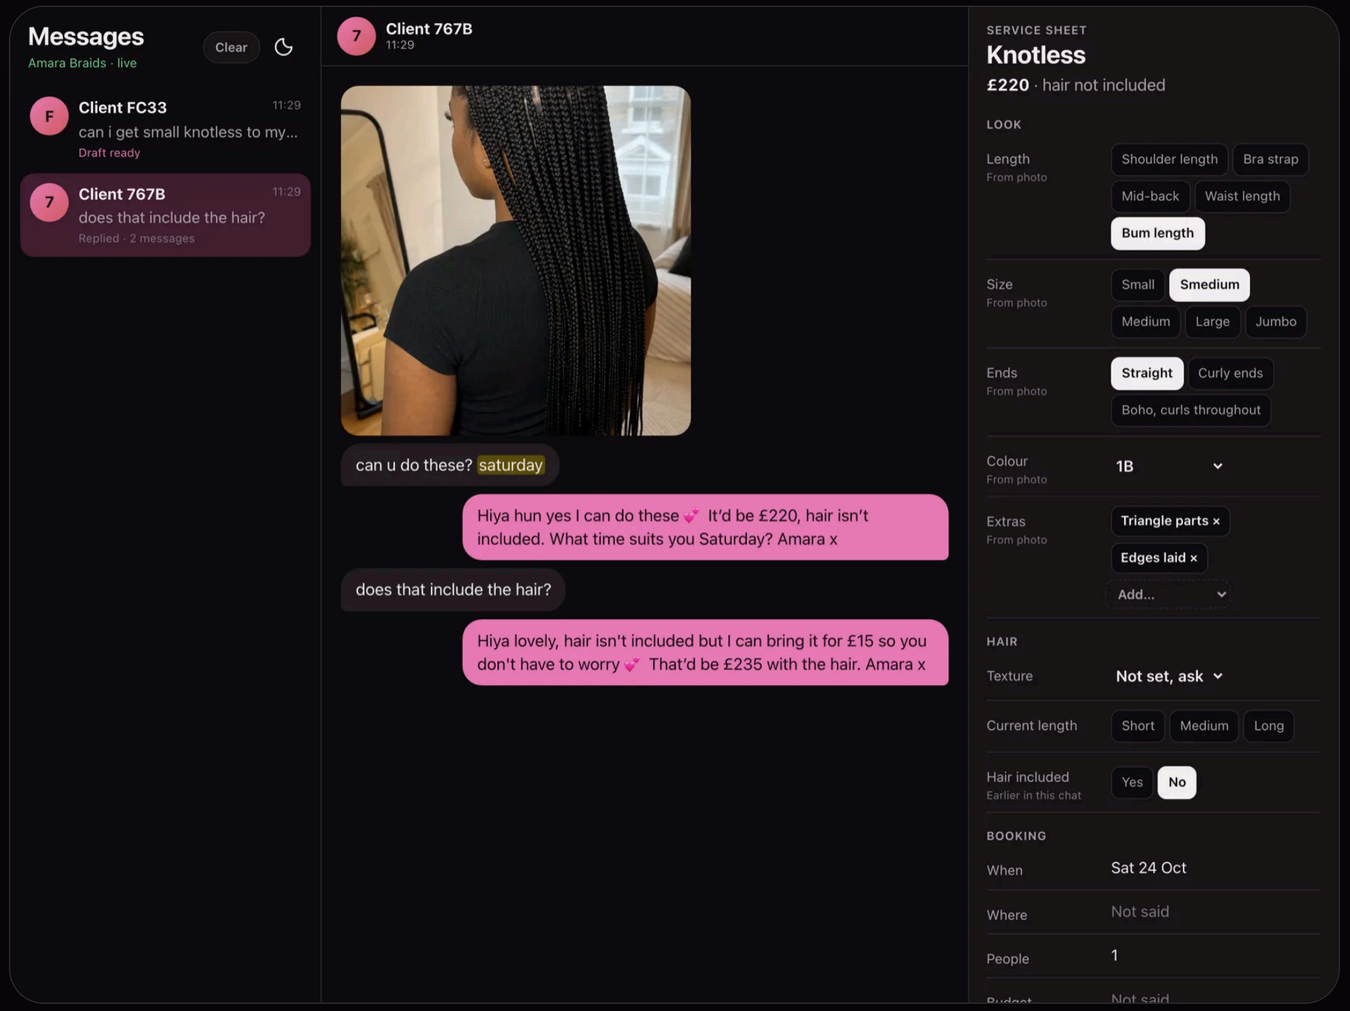

me and my sister want braids

[voice note] hi um so I wanted to ask about...

- Independent stylists run their business from Instagram DMs, mostly at night.
- Before anything is booked she has to ask what they want, explain her price and rules, and offer a time.
- Generic AI replies get her prices and rules wrong, and don’t sound like her.

THE PRODUCT

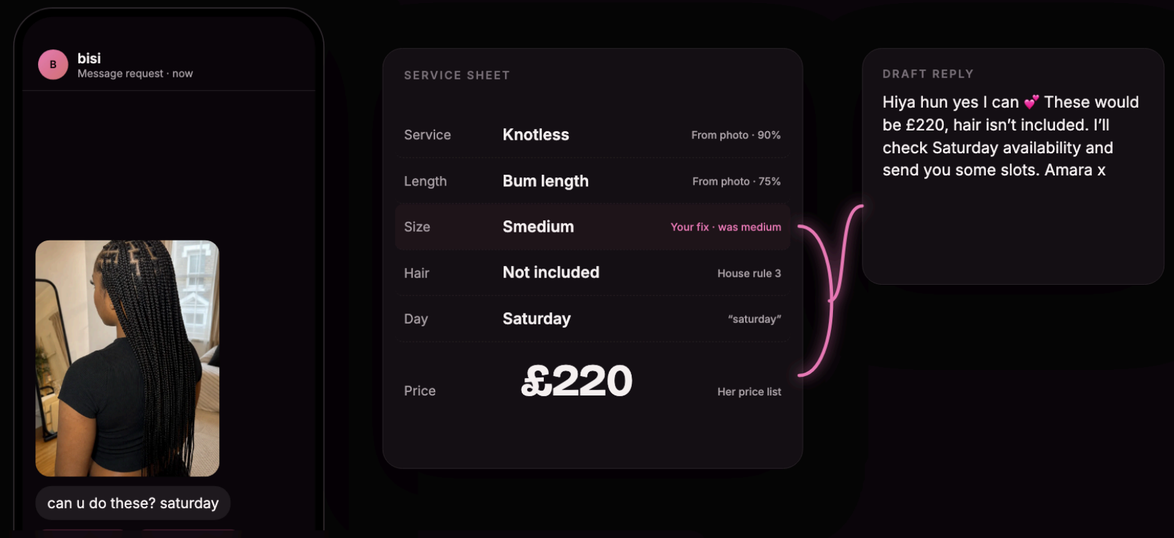

Vague message in. Specific reply out.

- The photo is read into tags from **her** list: knotless, bum length, size.
- A service sheet fills itself. Every field shows its source; anything without one is cleared.
- The price comes from her price list, never from the model.
- The reply is drafted in her voice, following her house rules.

ONE TAP

She fixes it once. The price and the reply follow.

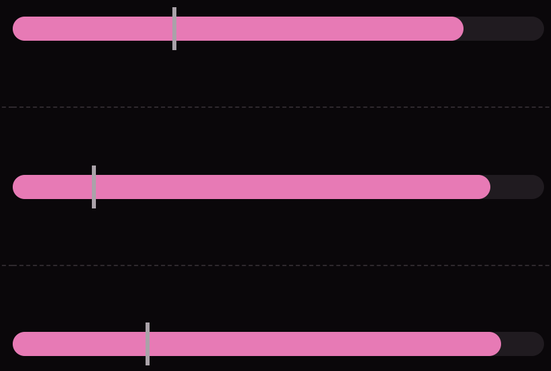

One tap. The price and the reply follow.

- The reader said medium. She taps **smedium**: £200 becomes **£220** and the reply re-drafts.
- Five seconds to undo. Fixes made together go as one.
- Replies she hasn't sent later in the thread re-draft too. If she already told the client £200, it offers a one-tap correction.
- When the client picks a time, **Confirm booking** sends the day, time and total in one message.

RESULTS · LOCKED TEST DMS, NEVER SENT TO MUBIT FOR TRAINING

From under a third of replies fully right to 85–92%.

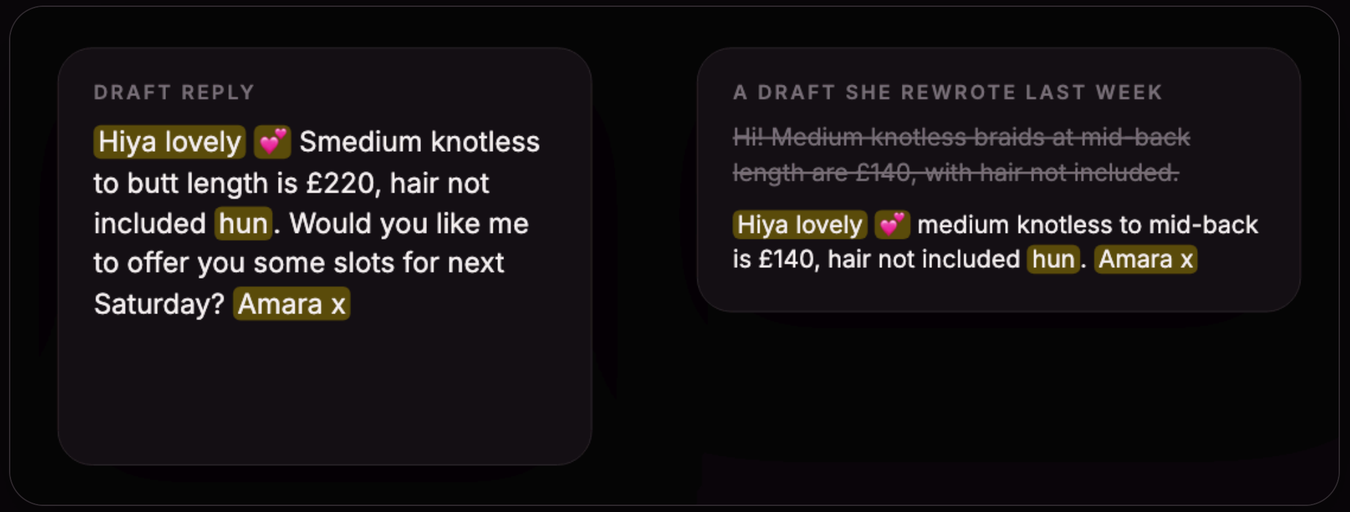

STYLIST	TEST DMS	PLAIN	HER FIXES	+ HER RULES
Amara Braids, braider	60	30%	47%	85%
Lived-in Colour, colourist	20	15%	45%	90%
Gloss by Jade, nail tech	24	25%	46%	92%

Fully right means every field of the brief matches the label. Her fixes guide the model; her rules in code decide the next step, what's missing, the dates and any clash between photo and text exactly. Every rule is checked against all 473 of her labels first; the locked set is then run three times and the middle run is shown.

IT LEARNS FROM HER

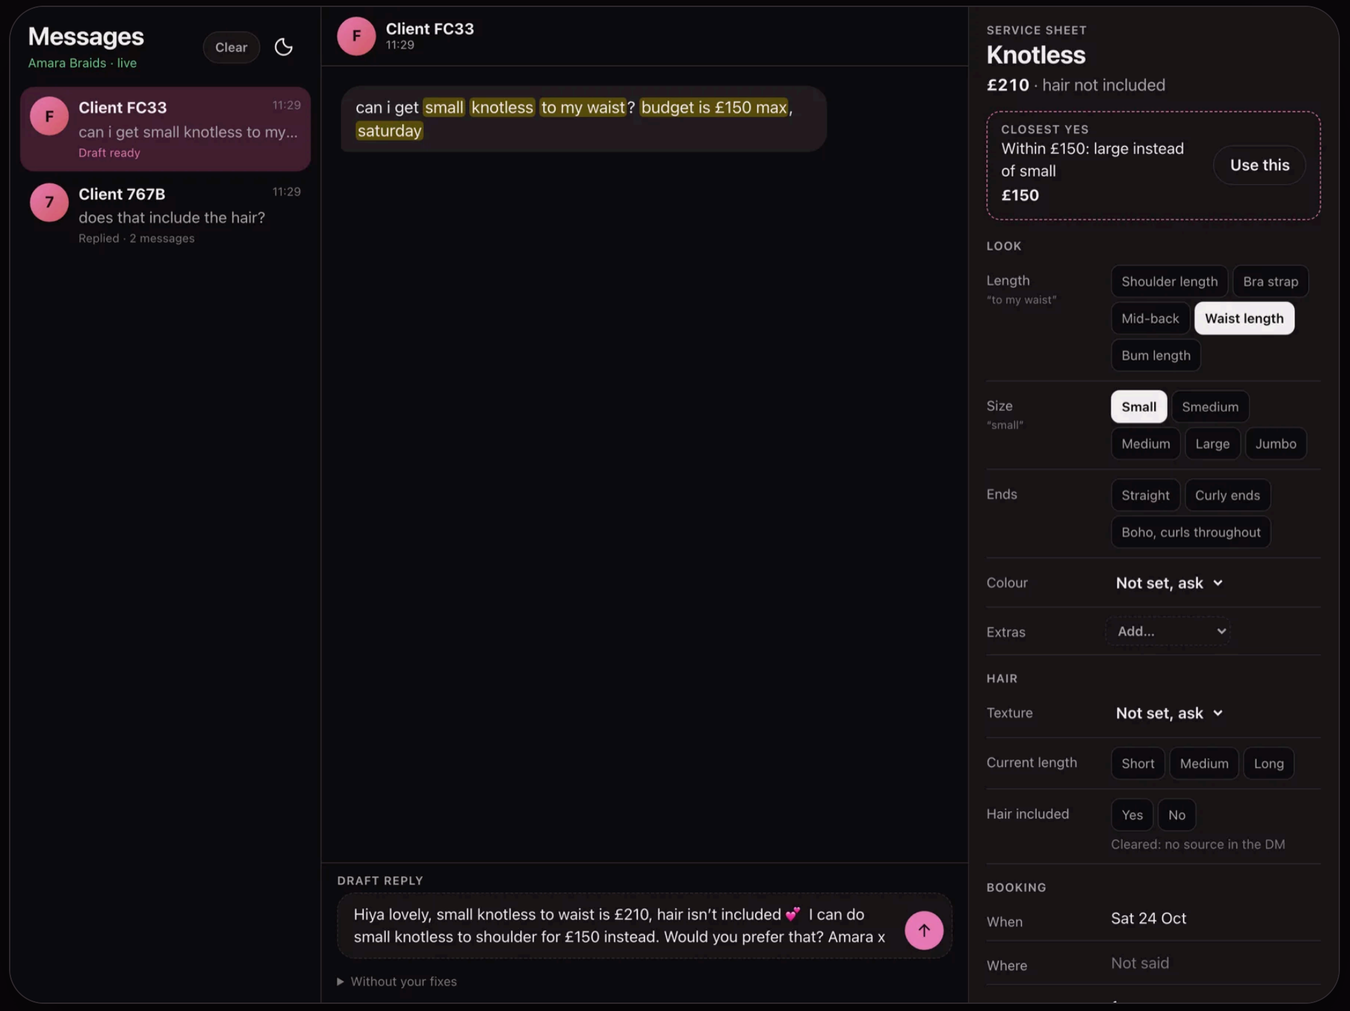

The next client gets it right first time. In her voice.

- **Her fixes:** the closest past fixes guide each new draft.
- **Her photos:** a photo fix applies to photos that look like it, not to every photo.
- **Her voice:** drafts she rewrites teach how she writes. Prices and details are masked, so only the style carries over.

CLOSEST YES

Every no comes with the closest yes.

- Small knotless to the waist, max £150: **large instead of small, £150**. Her length stays.
- A wig install: a sew-in instead. Babylights over budget: highlights.
- Worked out from her price list, changing what clients care about least first. One tap applies it as a fix.

USE OF MUBIT

Every fix pays off twice.

TODAY

30% → 85%

Her fixes and rules shape the next draft straight away. Replies fully right on DMs it never trained on.

OVER TIME

Her own model

Mubit trains her fixes into a small model just for her. In training now: her first version matches the big model on 50% of tests, aiming for 95%.

Every model call goes through Mubit. Test runs are never used for training.

TECHNICAL EXECUTION

Built so a stylist can trust what it sends.

- **Nothing invented:** every field quotes the DM or a confident photo tag, or it’s cleared.
- **Her numbers:** prices and the closest yes come from her price list in code.
- **Conversations:** a settled field changes only when the new message says so.
- **One Mubit task per stylist:** the instructions depend only on her profile; her fix rides in the message.
- **Measured honestly:** her rules in code agree with all 473 of her labels; the locked set runs three times, through the same code the app runs.
- **Clean tests:** scoring runs send **x-middleware-record: off**, so they never become training data.
- **Private by design:** clients see only their own thread; the Mubit key stays on the server, and the stylist key never goes in a URL.
- **Abuse limits:** per-client and per-room rate limits, image size checks, uploads checked by their actual file type.
- **Stack:** TanStack Start on Cloudflare Workers, one Durable Object per stylist, Effect Schema.

THREE STYLISTS, ONE ENGINE

Her rules. Her prices. Her voice.

Amara Braids

Peckham · knotless, box braids, locs

can u do these? saturday

Hiya hun yes I can 💞 These would be £220, hair isn't included. Amara x

Lived-in Colour

Dalston · balayage and colour

full colour 🙏 I've used box dye

As you've used box dye, I'd need to see your hair at a free 15-minute consultation first.

Gloss by Jade

Hackney · BIAB, gel, acrylics

long coffin acrylics with chrome on sat, got gel on from another salon

Long coffin acrylics with chrome and a soak-off would be £68.

Next: her real calendar so it offers only free slots, deposits at booking, Instagram's messaging API, and serving her adapter once it passes.
